

SAGAR KHADKA

3313 Versante Dr, Bedford, TX-76021 | P: 817-371-9345 | sagarkhadka479@gmail.com
LinkedIn: <https://www.linkedin.com/in/sagarkhadkaa/> | GitHub: github.com/uta-sxk0000

EDUCATION

University of Texas at Arlington

Arlington, TX

Bachelor's in Computer Science, Cumulative GPA: 3.73/4.0

Expected: December 2026

Relevant Coursework: Algorithm and Data Structure, Software Engineering, Artificial Intelligence, Object Oriented Programming, Theoretical CS, Statistics, Linear Algebra, Operating System, Cybersecurity, Digital Forensics

RELEVANT SKILLS AND CERTIFICATES

Languages: Python, Java, C, C++, Kotlin

Frameworks: Flask, Django

Systems & Tools: Git, Docker, Linux, AWS (EC2, S3)

Concepts: Mobile App Development, Backend Development, Authentication Workflows, Database Design, Database Integration, UI/UX Design

Methodologies: Agile (Scrum), SDLC

Certifications & Trainings:

- Department of Energy (DOE) Cybersecurity Training Program – SRESFS
- CompTIA CertMaster Practice for Security+ (SY0-701)
- Foundations of Project Management - Google, Coursera
- Debugging C Code - LinkedIn Learning
- Using Git with Visual Studio Code - LinkedIn Learning

UNIVERSITY PROJECTS

AgriHome – AI-Powered Smart Agriculture System

Jan 2026 - Present

Next.js, TypeScript, Python, TensorFlow, Docker | *University of Texas at Arlington*

- Built a full-stack web platform integrating a computer vision model to detect plant diseases from images in real time.
- Developed and trained a CNN model on ~17,000+ images across 38 classes for plant disease classification.
- Designed backend APIs to connect the AI model with a user-facing dashboard for image upload and prediction
- Containerized the application using Docker to enable scalable and consistent deployment.
- Implemented authentication and plant monitoring features to support end-to-end user interaction.

QuickSeat — Restaurant Reservation App

Sept 2025 - Dec 2025

C, Kotlin, GitHub, Android Studio | *University of Texas at Arlington*

- Implemented user authentication and connected user data to a backend database for persistent account and reservation storage.
- Designed and integrated database workflows with structured app logic to manage real-time reservations, queue data, user sessions, and check-in processing.
- Developed responsive Android UI components and performed testing/debugging to ensure usability, reliable data handling, and stable application performance.
- Built a full-stack Android application enabling real-time restaurant reservations and user authentication with persistent backend storage.
- Worked in a Scrum-based Agile team, participating in sprint planning, task breakdown, and iterative feature development.

Checkers (Game Developer)

Mar 2025 - May 2025

Java, JUnit, GitHub | *University of Texas at Arlington*

- Collaborated in a multi-team software engineering project simulating a modular checkers game; led development of the Game Manager subsystem.
- Designed and implemented the Game Manager module to control active game sessions, enforce rules, and manage turn-based logic.
- Developed Java classes and methods to handle move validation, game state transitions, and king promotion mechanics.
- Wrote and executed JUnit tests targeting critical methods to ensure correctness and rule compliance.
- Collaborated in a large-scale Agile (Scrum) team of ~40 developers, contributing to sprint-based feature development, code integration, and version control using Git.

Elevator Controller Simulator

Feb. 2025 - Mar 2025

C, Makefile, GitHub | *University of Texas at Arlington*

- Designed and implemented a real-time elevator controller in C using a state-machine architecture to handle asynchronous user requests, door operations, and floor transitions.
- Developed and integrated a custom elevatorController in C to manage elevator logic, including floor detection, door control, and user input handling.
- Engineered system logic to manage concurrent events, ensuring correct sequencing of movement, door control, and emergency handling.

EXPERIENCES

Cybersecurity Intern

South Carolina State University, SC

SRESFS (Savannah River Environmental Sciences Field Station)

May 2025 – July 2025

- Collaborated with federal and academic mentors to apply forensic science and engineering principles to real-world cybersecurity scenarios.
- Investigated simulated cybercrime cases using FTK Imager, Autopsy, and Sleuth Kit; preserved evidence and analyzed 30GB+ of digital artifacts
- Presented a digital forensic case study: extracted indicators of compromise (IOCs), traced threat actor behavior, maintained full chain-of-custody, and compiled a legally admissible forensic report.
- Implemented forensic workflows: evidence acquisition, hash validation (MD5/SHA1), timeline reconstruction, and malware/web activity analysis
- Gained practical experience with IAM, CIA triad, cryptography, malware mitigation, and network security concepts aligned with CompTIA Security+.
- Examined legal and ethical dimensions of cybercrime including GDPR compliance, digital evidence admissibility, risk governance frameworks, and forensic documentation best practices

Technology Consultant Intern

Dallas, TX

Savin Technologies, Inc.

Dec 2021 – Dec 2023

- Collaborated with senior consultants to define and document business and functional requirements, while participating in project planning, scheduling, and coordination.
- Troubleshoot and resolve technical issues, including software deployment errors, database inconsistencies, and network configuration challenges.
- Supported the design and implementation of IT solutions such as cloud-based infrastructure migrations tailored to client needs, ensuring effective resolution of technical challenges under expert guidance.

ACTIVITIES

HackUTA 2024 (One of North Texas' largest hackathons),

Oct 2024 – Oct 2024

Participant: developed team-based prototype in 24-hour hackathon

PepsiCo Kickstart Leadership Program,

Jun 2024 – Jul 2024

Member: participated in digital innovation case competition

Ecommerce Business,

Mar 2024 – Present

Self-employed: Managed TikTok-based sales analytics and customer data insights

Phi Theta Kappa, Committee Member

Jan 2022 – Present

Volunteer, UTA Engineering Career Fair

Oct 2024 - Oct 2024

AWARDS

- PepsiCo S.M.I.L.E Scholarship Award Recipient: Awarded \$25,000 (based on academic excellence.)
- Mav Grant Undergraduate and Transfer Honor Scholarship: Awarded \$7,900
- Provost's Honors Recognition at Dallas College: Honor was based on academic excellence.
- Nike HSI Scholarship Award Recipient: Awarded \$10,000 (based on academic excellence and extracurricular activity.)
